"Student Age Analyzer"

```
package javaUno;

import java.util.Scanner;
public class StudentAgeAnalyzerAbenoja {

    public static String Age(int num){

        if (num < 0) {
            return "Invalid Age";
        }else if (num <= 12){
            return "Child";
        } else if (num <=19){
            return "Teenager";
        } else if (num >=20 || num <=59){
            return "Adult";
        } else {
            return "Senior Citizen;
        }
}

    public static void main (String[] args){
        Scanner input = new Scanner(System.in);
        System.out.println("Student Name: ");
        String name = input.nextLine();

        System.out.println("Age: ");
        int age = input.nextInt();

        System.out.println("Age Catzgory is: " + Age(age));
    }
}
```
